NEW pilot newborn screening EQA for 2020

GenQA are delighted to announce that they will be offering a pilot External Quality Assessment (EQA) in 2020 for:

Newborn screening for Severe Combined Immunodeficiency (SCID)

As the UK NEQAS provider for genomic EQAs, GenQA were approached by Public Health England (PHE) to provide this EQA, to coincide with the implementation of high quality newborn SCID screening in the UK.

The EQA will be based on **TREC (T cell receptor excision circles)** detection using blood spot cards and participation will be open to all interested laboratories (including non-UK) offering newborn TREC analysis for SCID.

To register your interest in this new EQA, please email info@genqa.org
